WORD OF CEO

Dear reader,

Since 2006, we are providing enterprise software and infrastructure management for a large number of clients from telecommunications and financial industries. Additionally, we add value with our software for projects of significance to the government and healthcare systems. We gather a team of experts with years of experience in the financial and telco businesses, that they use to consult our clients and make the most out of the digitalization process they undergo through implementation of our software.

We are a highly organized team approaching problem solving from an agile perspective, and we tend to stay with our clients for the long term, helping them grow in every step of the way. We are proud to have firm and long-term business relations with European telecommunications and financial giants. Recently we have opened our new offices in Vienna, Austria, to facilitate our rapid internacional expansion and collaboration with an increasing number of companies in Europe and world wide.
Complete portfolio of our products, along with the list of our partners, can be found at **logate.com**

Thank you for the time you will spend getting to know our company, our services and products.
We are looking forward to your response and our future cooperation.

Yours sincerely,
PREDRAG BISKUPOVIĆ,
CEO
Company background

Logate is a customer-focused company made of ambitious IT professionals. The company is founded in 2006, in Podgorica, Montenegro.

Our principal area of activity is development of specialized software solutions for enterprise clients from telecommunications and fintech industries. Every product is built on strong technical skills, domain-specific expertise and diverse background of team members.

We are partial owner of Montenegrin branch of Poslovna inteligencija, through which we provide business intelligence solutions to our clients.

Through years of collective experience in telco and fintech world, we created highly specialized solutions that help transform the businesses of our client, ultimately helping them achieve their goals. Our philosophy revolves around in-depth understanding of client's business and the environments in which they operate, which enables us to carefully curate the digital solutions for their specific needs. Additionally, based on our industry experience, we strive to add value to the projects we do by acting as consultants to our clients, where we share insights, ideas and advice on how they could advance their operations and results.

Vision, mission and goals

Logate is a company which values good interpersonal relations, high quality and above all human approach to clients. Here's who we are.

Vision
Our vision is to professionally serve global-born companies with our specialized products relying on a solid organizational culture.

Mission
Our mission is to make the business ecosystems innovative, smart and agile, by using technology. We strive to make our clients productive and successful, through a long-term collaboration, so that they never have the need to replace us.
Our values

At Logate, we believe that key to our success lies within our shared values. Besides a bundle of knowledge and experience that our team shares and builds through years of work in the industry, we also build and cultivate:

✓ **DESIRE FOR EXCELLENCE**

✓ **FOCUS ON RESULTS**

✓ **TEAMWORK AND FUN**

✓ **PASSION FOR INNOVATION**

By choosing Logate as your software solutions provider, you receive the added benefits of supporting our mission. They are:

- Reliable and competent **long-term outsourcing partner** who complements your expertise and can help you with future projects.

- Partner who implements **agile development methodologies** with strong project management and UX design backgroungs.

- Guarantee of **full traceability** of the development and implementation process and a high level of commitment. Best software gets coded in harmonious teams.

Bottom line of the company philosophy is building a **long-term business partnership** with its clients where interpersonal relationship, reliability, assured quality and modern technology are the major building bricks.

Our team and capabilities

Logate team

We are the company where professionals from technical as well as functional field get together with the same objective: providing appropriate business solutions to clients.

We are proud that we employ a team of 70 developers, designers, analysts and project managers - all of whom are masters of their crafts and have over 100 years of collective experience in development, maintenance and support in the domain of enterprise-grade software solutions.

They all have skills that cover many state-of-the-art technologies and industry specializations, and are ready to make your project a smashing success.

Capabilities

Logate team is specialized in different system development tasks.
The key areas are:

Project Management   Business Consulting

Technical Consulting   Solution Architecture

Development   Training   System Engineering

Design   Quality Assurance (QA)

Compliance with quality standards

Logate is compliant with the following internationally recognized standards:

• ISO 9001:2015
for Quality Management System (QMS)

• ISO 27001:2013
for Information Security Management

• ISO 20000-1:2011
for Information Technology Service Management (ITSM) System

OpenProvider

OpenProvider 3GPP AAA/AUSF platform

OpenProvider is scalable and fast enterprise class policy, charging control and subscriber data management platform that enables operators to do real time network management on a variety of attributes.

OpenProvider is designed as Virtualized Network Function (VNF) and Cloud Network Function (CNF).

✓ **Manage and monetize Carrier network for all access technologies (WiFi, DSL/FTTH, 3G, LTE, 5G)**

✓ **Fast and easy deployment of fixed-mobile convergence (FMC)**

✓ **Fast and easy deployment of VoWiFi**

15 years
Of market presence

OP

20 million
**Subscriber accounts managed with OpenProvider**

Key solution advantages

- Containing a complete set of 3GPP AAA functionality

- Easy configuration and service building using low code/no code principles through a web based administration interface

- Supporting horizontal scaling with linear performance increase

- Cloud-native platform based on Open Source technologies

- Geo-redundant load sharing platform (Edge computing)

OpenProvider

OpenProvider Features

- Vendor agnostic solution which supports all 3GPP NAS servers from all vendors

- Real time policy and charging control providing the push-enabled mechanism that controls service activation/deactivation within the same session

- Numerous options on how to handle charging and rating
- Completely scalable Captive portal
- AAA for WiFi network (Captive portal authorization, Seamless authorization with EAP-PEAP, EAP-TLS) Mobile network authorization EAP-SIM, EAP-AKA)

- AAA for Fixed network (DSL, Optics)

- AAA for Fixed and Mobile Convergence (FMC)

- Supports PAP/CHAP/MSCHAP authentication with username and password, unique pin, calling station, and many more options

- EAP-SIM/AKA supporting local breakout or providing attributes for WAG to create GTP tunnels to mobile core

- LDAP Ud interface, authentication to cDB/HSS

- Supporting RADIUS PoD and CoA

- Supports 3GPP AAA Diameter interfaces for VoWiFi implementation (SWx, SWm, S6b)

- Supports DHCP (our vAAA can dedicate IP addresses, IP pools etc)

(Member of Deutsche Telekom group)

Magenta Telekom, Austria FMC AAA Solution

- Fixed Mobile Converged product, which is subsequently called Hybrid Access*.
  Hybrid Access is a fixed net proposition and promised a LTE based bandwidth boost once the customer needs a higher bandwidth than the fixed line is capable.
  Hybrid Access combines fixed DSL connection with mobile LTE connection into single tunnel combining bandwidths allowing customers highest Internet speed possible.
- Deployed in 2016. Ongoing subscription and SLA.

Magenta Telecom, Austria VoWiFi Solution

- Voice over WiFi (VoWiFi) is standard definition for the delivery of services currently provided via Circuit Switch networks, mainly voice and SMS, over WiFi access network, leveraging the core network IP Multimedia Sub-System (IMS).
- It is designed to fully integrate with the existing user experience that is currently implemented with circuit switched voice devices, and therefore whether the call is a circuit switched call, VoLTE or a VoWiFi, call is transparent to the end user (including when moving between LTE and WiFi).
- Integration with EPC (deployment Q3 2018)
- ePDG (Diameter SWm)
- PG-W (Diameter S6b)
- ePC-HSS (Diameter SWx)
- Deployed in 2017. Ongoing subscription and SLA.

OpenProvider
SBB Serbia
(member of United Group)

- UniFi WiFi is a network with more than
  5.000 professional Hotspots and over 650.000
  community home gateways in 5 countries (Serbia,
  Bosnia and Herzegovina, Slovenia, Macedonia and
  Montenegro).
  Once connected on WiFi network user stays
  connected while in reach of UniFi network,
  transferring from Access Point to Access Point
  without losing connection or changing IP address.
  User automatically connects to UniFi network
  whenever in reach without required action
  (Seamless).

- IP policy management and charging control for
  SBB (Serbia Broadband) Wi-Fi users (UniFi project,
  deployed at 2014, ongoing subscription and SLA)
- Seamless authorization with EAP-PEAP/TTLS with
  IP Mobility.
- UniFi Mobile App for iOS, Android and Windows
  mobile platforms.
- Captive portal for WiFi authentication for Serbian
  Broadband Network, Telemach Slovenia, Telemach
  Bosnia and Herzegovina and WISPr roaming with
  SUN Wireless Macedonia and iPass.
- Deployed in 2014. Ongoing subscription and SLA.

OpenProvider

Telemach Slovenia, Montenegro and BiH (members of United Group)

- Telemach Slovenia - Mobile Data Offload with seamless EAP-SIM/AKA mobile device authentication.
- Active-Active DRS site implementation for UniFi project (primary OpenProvider site in SBB Serbia, secondary site in Telemach Slovenia)
- Ongoing subscription and SLA.

Hrvatski Telekom (member of Deutsche Telekom group)

- vAAA VNF deployment Mobile, voWiFi
- OpenStack NFV infrastructure
- Active-Active Geo redundancy Single VNF deployment over 3 Data Centers
- Deployments in 2018 and 2021. Ongoing subscription and SLA.

OpenProvider
Crnogorski Telekom
(Member of Deutsche Telekom group)

- IP Policy, charging control and subscriber data management for Broadband, Mobile and Wi-Fi users
- More than 100 services including Dial-Up, ADSL, VDSL, Optics and WiFi services for over 250.000 subscribers.
- Captive portal for WiFi authorization and Captive services.
- Broadband on Demand for Customers with IPTV without Internet, IPTV CPE has enabled WiFi network where Customer can connect and request Internet for day, week or month.
- 3GPP AAA for 3G/4G mobile users on public and private APNs
- Ongoing subscription and SLA.

OpenProvider

Telekom Serbia

- vAAA for Fix Services (DSL, Dial-Up, Wi-Fi, VPN)
- vAAA for Mobile services
- vAAA VNF deployment
  (OpenStack NFV infrastructure)
- Load-Sharing Geo redundancy
  (Single VNF deployment over 2 Data Centers)
- Cassandra database cluster over 2 Data Centers
  (N+1 DC model supported)
- Deployments in 2019 and 2020.
  Ongoing subscription and SLA

Mtel Austria

- Implementation of OpenProvider for policing,
  assigning IPv4 and IPv6 addresses as dual stack
  solution and redirection to NOC portal for
  suspended or disabled subscribers
- Customer Database(CDB) for all Mtel Austria
  subscribers which is integrated with CRM via REST
  and OpenProvider via LDAP protocol
- Deployed in 2021. Ongoing subscription and SLA.

Cetin Serbia

- vAAA for Fix services (DSL, Dial-Up, WiFi, VPN)
  (Multi vendor environment with Cisco and Nokia BNGs)
- vAAA for Mobile services 3G and 4G
  (CDB for Fix services LDAP cDB)
- vAAA VNF deployment
- Deployed in 2021. Ongoing subscription and SLA.

CX CX360   **CC** Connect   **FX** FolderX   **TP** TouchPoint

CX360

CX360 is a specialized banking CRM that acts as an all-in-one platform for employees in various sectors that deal with client data.
Originally a Loan Tracking System, CX360 evolved to serve the needs of collection, marketing, sales, business development and other sectors that interact with clients.

CX360 is made for:

Banks

Other financial institutions

360°View

360°View shows essential client data, such as personal information, portfolio and account details. Employee and supervisor can see to do list for the specific client, as well as communication history between past/currently assigned employees and the client, making it easier to gather intel and reasign client to another employee. Financial institutions can also create custom processes that are in line with their goals and business practices.

	CX360 ✓	**Similar Solutions** ✕

CX360

Modules

Loan Tracking System

Loan Tracking System is a module for debt collection, covering all aspects of early and late collection processes.
Instead of using several systems to communicate with the client, Loan Tracking System integrates with contact center and messaging solutions to automate communication regarding debt collection. Results of LTS implementation:

• Significantly increased number of sent out messages
• Significantly increased number of calls
• Increased overall efficiency of the collection department
• Better customer experience
• Reduced NPL ratio in the overall loan portfolio

Sales Opportunities

Sales Opportunities module is made for a modern approach in sales processes that heavily relies on personalization.
It is designed to empower your team with detailed information for proactive approach in contacting leads or existing clients. Supervisors can track progress of employees, identify top performers and coach those struggling to close sales.

Complaint Manager

One study shows that 68% of customers become annoyed when their call is transfered to another department. Complaint Manager module ensures each complaint your institution receives is passed on to the right employee. Cross-sector collaboration is also possible on issues that require employees from several sectors to work together in order to provide the solution.

KYC/AML Task Manager

How well do you know your clients?
With KYC/AML Task Manager, your financial instutition will always have the most up to date client documents. Whether it is ID or any other piece of information relevant to you, KYC/AML Task Manager can create automated tasks for employees or group of employees to follow up and check in with the client. Based on your preset parameters, the system can detect any irregular activity and notify employees, urging them to ask for information from the clients, protecting your bank from suspicious or illegal undertakings.

Client On-boarding

Client On-boarding module provides the entire set of tools needed for account registration, even remotely.
This module can be integrated with e-signature certificates and video calls for maximum security.
CX360 can easily integrate with our Connect contact center solution but it is also vendor agnostic and can work in symbiosis with any other contact center software.

Product Catalog

Product catalog lists all of your products in one place. With this module you can create set of procedures and automated approval rules for any business process.

CX360

CX360 modules have been implemented in these Banks and Financial Institutions:

Naša AIK Bank

ERSTE Bank

Crnogorska Komercijalna Banka

NLB Bank

Addiko Bank

Prva Banka Crne Gore

Investment and Development Fund of Montenegro

Komercijalna bank AD Podgorica

Societe Generale Montenegro

Atlas Bank

Connect

Connect is an all-in-one communication platform for improving customer experience, optimizing resources and increasing overall productivity in responding to customer requests.

**Connect is made for:**

Telecoms

Healthcare institutions

Banks and other financial institutions

Government institutions

E-commerce stores

BPO companies (customer support, telemarketing, polling organizations)

Tourism and hospitality companies

Problems your business might be facing:

- numerous customer inquiries
- multiple communication platforms that are not integrated (calls, whatsapp, SMS, video calls)
- loss of leads
- frustrated clients whose problems are not solved
- lack of personalization in communication with customers
- use of costly legacy solutions

How Connect helps you solve those problems:

- Omni-channel communication
- Know Your Customer with detailed communication history
- Communication channel modules to suit your needs
- In-depth analytics to identify top performers
- IVR & callback functions for efficiency and servicing EVERY customer
- Vendor-agnostic integration with CRM and other systems and solutions
- Features to support training and talent on-boarding

Connect
Features

Admin Data Dashboard

Admin data dashboard is a tool for supervisors that shows number of interactions by channel, as well as standard KPIs modern companies are using to assess efficiency, overload and customer service level.

Wallboard

Wallboard is an administrator feature that shows the overview of current interactions in real time.
Supervisors can use Wallboard to check statistics, such as number of missed calls, number of missed chats, number of VIP clients on hold, status of every agent and more.

Operator Dashboard

Operator dashboard is created as the all-in-one communication channel for agents, where they interact with customers and classify each interaction.
Once the interaction starts, the left side menu with customer contact information will pop up if the system recognizes an existing customer.
If it's a new customer, the agent will be guided to create a new contact based on the customer's phone number/ email address or social media profile.
Once the interaction is complete, the agent will be given time to classify it before initiating new conversations.
Campaigns

Managers can create campaigns based on preset questions and answers which will then be forwarded to the contact center agents, along with further instructions. Campaigns can be initiated to qualify leads and facilitate opinion polls.
With preset questions and answers, Connect ensures the information is gathered quickly with no room for error.

CONNECT

	CC Connect ✓	**Similar Solutions** ✗

TouchPoint

TouchPoint is a bulk messaging and notification system.
Enterprises can use TouchPoint to send transactional or promotional messages and notifications, for any sphere of the business. Messages can be delivered via Viber or standard SMS, whereas notifications are integrated within the mobile and web apps.
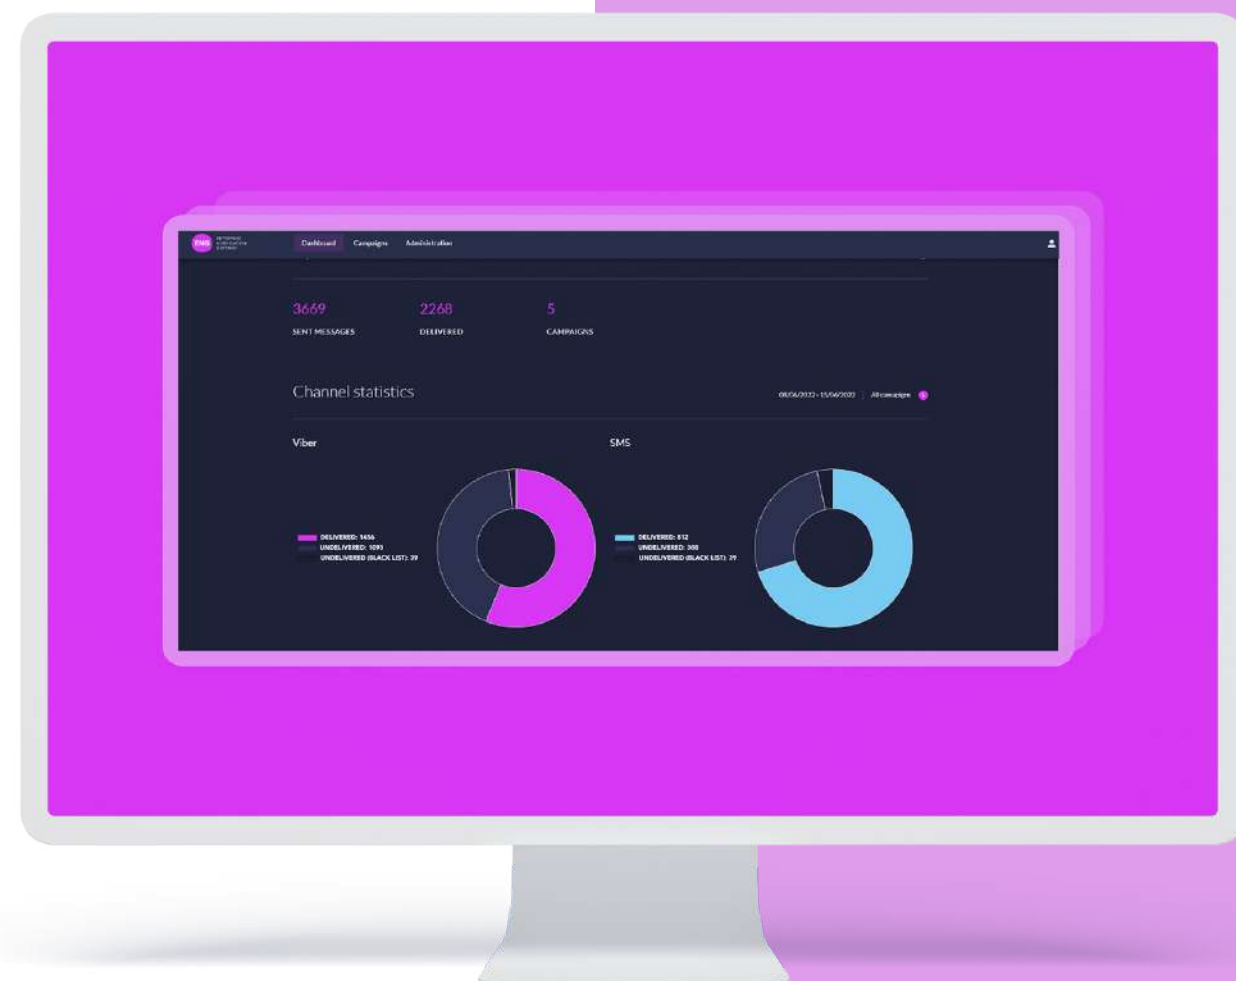

TouchPoint is made for:

Telecoms

Banks and other financial institutions

E-commerce stores

Enterprises with large customer bases

Modules

SMS Texts

Many studies show that SMS delivery rate of 98% surpases any other channel by a long shot. It is a preffered channel for sending transactional messages.

Viber texts

Logate can offer competitive prices as the official Viber partner. Viber texts have a high delivery rate but also offer rich text options, such as attaching catalogs or photos along with CTA buttons.

Reporting

In a few clicks, you can generate custom reports on active and past campaigns, with the metrics relevant to your business.

Push notifications

Push notifications can be integrated within the mobile and web apps to send reminders, notifications and short promo texts to app users. As businesses are competing for user's short attention span, push notifications are becoming a preferred messaging channel.

Fallback

Implementation of both, SMS and Viber modules, is a prerequirement for fallback function. Fallback enables smart budgetting and sends messages via Viber first and, in case the message is not delivered, switches to SMS. It saves money and ensures messages are delivered.

TOUCHPOINT

Who Uses TouchPoint:

ERSTE Bank

Clinical Center of Montenegro

Lovćen Bank

FolderX

FolderX is an archiving solution and document management system (DMS) with business process administration. This complex solution tracks the document path, from its origination to shelving, ensuring that documents are always traceable and accessible.
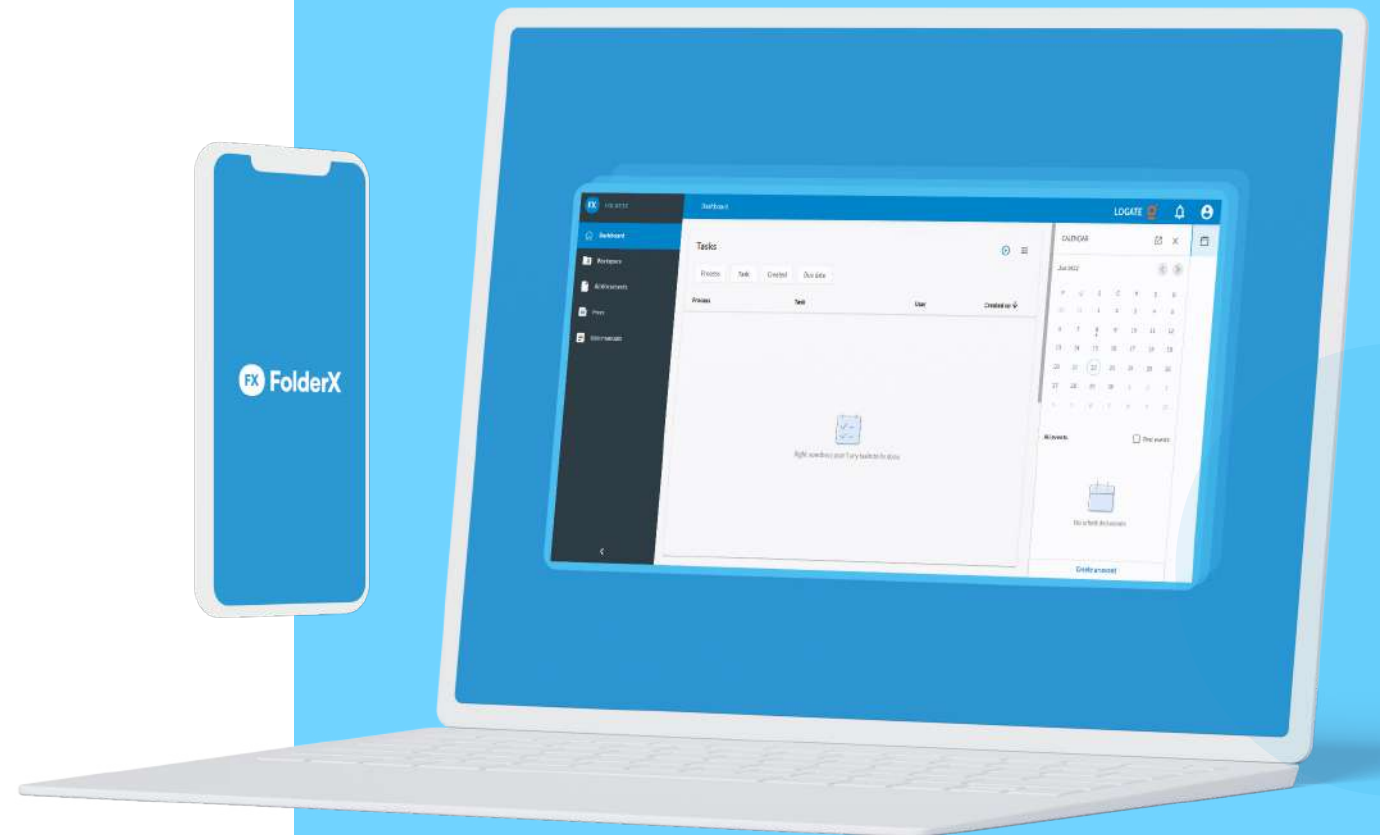

FolderX is made for:

Public institutions

Banks and financial instituitons

Lawyers, notaries and accountants

Enterprises that work with substantial amount of documents

Modules

Archiving solution

Archiving solution provides the option for digital shelving for enterprises. Folders can be seen with shelves that branch into specific sections connected with physical shelves and/or other storage units. With archiving solution and advanced filtering options, employees will always know where each document is.

Document Management System (DMS)

DMS module manages electronic documents with the possibility for customizing each digital workspace which is divided into folders. Employees can create, edit, share and import/export documents easily. Each version of the document is saved and can be quickly restored, if needed.

Business process administration

In order to make processes such as approvals, orders, contract signing and other routine tasks more efficient, the business process administration module enables enterprises to create template processes specific to their businesses.

OpenMX overview

Scalable, flexible, fast and secure carrier grade Mail exchange system designed to serve millions of users.

OpenMX offers high availability and scalability service on every subsystem and component level. This mail system enables easy maintenance and configuration administered using web based interface.
OpenMX could be implemented on bare bone hardware, on existing Linux installations, as virtual machine appliance, or as cloud instance.

Open-source based solution

Multiple stage security features (anti-virus and anti-spam protection)

Configuration of various policies

**Support for collaboration protocols**

Key solution benefits

• Security-focused mailing system
• Customized and modern design solution
• Simple management and configuration
• Compatible with other mail clients
• Responsive and mobile-friendly interface
• Cost reduction and time saving on billing management and technical support
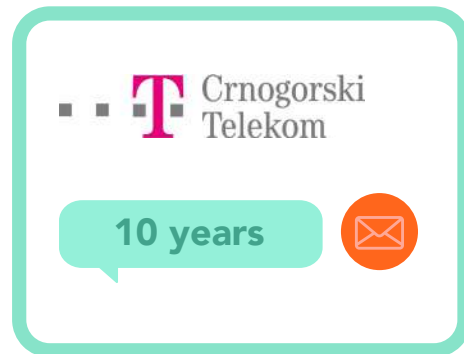

OpenMX functionalities

• Webmail interface
• Administrator Dashboard
• Domain Administrator Dashboard
• Statistics
• User Administration
• Account Administration
• Domain Administration
• Groups
• DNS Lists
• Logs
• Billing

OpenMX billing management

OpenMX allows for implementation of billing functionalities in the administration part, enabling the client to have an insight into data about account usage, and enabling creation of invoices for email users.

Corporate responsibility and initiative

At Logate, apart from striving to acquire new knowledge, excellence and innovation in the field of information technologies, we also strive to share our enthusiasm and knowledge with the world and encourage younger and older generations to join us in the exciting IT adventure.

We manage to teach and gather IT communities and individuals for meetups, knowledge sharing, competitions and many other occasions through our community project **Hackathon**, **and our own ICT academy - Logate Institute for Information Technology.**
LOGATE INSTITUT

Logate Institute for Information Technology

In February 2018 we have founded Logate Institute for Information Technology, with an aim to motivate and give opportunity to people of all ages in Montenegro to learn programming and kickstart their IT careers.

Within 5 years of existence, Logate Institute has become a recognized organization on the Montenegrin IT scene for providing specialized IT education and preparing its students to enter the workforce immediately upon completion.

Our teaching team is made of 17 professionals among which are 5 doctors of ICT sciences and most recognized university professors, Logate experts, experts from governmental and public institutions, and experts from some of the most recognized Montenegrin companies.

17
Specialized courses for adults and children

20
Experienced ICT lecturers

300
Students trained

300
Children who finished programming courses

Courses and training for adults

Logate Institute provides specialized course for adults that prepare them for working in IT companies within the domain of their specialization.

These courses are being taught in different Montenegrin cities, and the number of cities is expanding regularly.

Apart from our specialized courses, within the Institute we collaborate with companies and institutions in providing tailor made, in-house training courses for their employees on different ICT topics related to their work (SQL, Data science, Spring, Angular, React, Machine learning, Linux, Project management and others).

Databases and SQL

Java development   **Web development**   **SPSS course**   **Machine learning**   **React programming**

Linux administration   **Wordpress development**   **Project management**   **Network administration**

Interactive courses for children

Logate Institute is dedicated to introducing the youngest population (6-18 years old) to the world of technology through fun, interactive courses for children, where, apart from logical thinking and creativity, they can also develop interpersonal skills by collaborating with their peers on different IT challenges. Through our courses for children, youngest ones are exploring their interests, gaining ICT literacy and getting ready to be efficient users and creators of technology.

We help children get to know the IT world through following courses:

Robotics and programming for children

Programming for the youngest

Creating games with Scratch (Basic)

Creating games with Scratch (Advanced)

Creating games with JavaScript

Artificial intelligence for children

Introduction to algorithms and programming in C++

Advanced algorithms and programming in C++

Introduction to programming - Python

Web programming in Python

logate.institute

HACKATHON
A regional programming marathon

For 7 years in a row, we have organized a programming competition, Hackathon, for all IT enthusiasts who enjoy solving tech problems in a competitive environment.

At first, Hackathon was a national competition, but as it evolved, it became a regional programming marathon. In the event, teams of 4 compete during 3 days to develop the best solution for a burning tech problem, and the competition results in numerous prizes for best solution as well as fine initiatives for further work on created solutions. Hackathon bred software solutions that found their appliance in various industries and helped solving numerous community and business problems.

Apart from Hackathon, since May 2019, we started the first technical conference in Montenegro, called Interakt, aimed at networking and knowledge sharing among IT experts and all of those who aspire to become ones. The first conference gathered experts from gaming industry, with over 100 participants interested to learn more about one of the fastest developing ICT branches.

After a successful event, we strive to continue bringing together experts and enthusiasts for knowledge sharing, insights, inspiration and networking in the industry in Balkans.
